

Key	Description of Activities
D1	Proposal of methods to formulate polymer based on literature examples
R1	Construction of a control device to minimise material waste
R2	Construction of device with formulated polymer
R3	Testing of device capabilites
C1	Formulation of polymer
C2	Analysis of processability of polymer
C3	Material testing of the processed polymer
M1	Initial report deadline
M2	Successful production of polymer for use in the project
M3	Construction of device with modified polymer complete
M4	Testing of self-healing device complete
